Engineered Biological Solutions for Drain Line Grease Control

The Problem:

Grease line back-ups create odor complaints, slip-and-fall accidents, and unbudgeted maintenance dollars. Managers wish to maintain a pleasant environment, keeping employees happy and customers coming back.

The Natural Solution: The BESTech Biofeed FS Dispenser

Bio-Clear, Inc. introduces the advanced **BESTech** grease remediation system saves clients money by reducing operating costs and the potential for health-code violations. The **BESTech** system helps to mitigate workplace risks while enhancing customers' dining experience.

The **BESTech** Biofeed FS system dispenses live, vegetative bacteria into drain lines as often as 21 times per day to soften and degrade the fat and grease that clog drain lines and fill grease traps. It reduces the need for drain line cleaning and reduces the frequency of pumping the grease interceptor.

- Installs under sinks with little or no modification to plumbing
- Small footprint and Self-contained
- Nothing to clean
- We can help you pass County Testing of Grease Traps
